

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Previously Presented) A telephone network interface for facilitating communications through use of a telephone with an embedded device through a gateway and for facilitating communications between a remote service provider and the gateway, the telephone network interface comprising:
 - a telephone interface for electronic communication with a telephone;
 - a gateway interface for electronic communications with a gateway;
 - an external telephone network interface for connecting the telephone network interface to an external telephone network; andconnection control, the connection control operating to cause the telephone to be selectively in electronic communication with the external telephone network for telephone calls such that a user at the telephone is capable of dialing out and is capable of receiving an incoming telephone call, and the connection control operating to selectively cause the telephone to be in electronic communication with the gateway for communicating with an embedded device such that device requests from the telephone are communicated to the gateway, wherein the gateway is in electronic communication with the embedded device, and the connection control operating to selectively cause the gateway to be in electronic communication with the external telephone network to enable electronic communications between a control service provider and the gateway, and wherein the gateway comprises device information about the embedded device.
2. (Original) The telephone network interface as defined in claim 1 further comprising a plurality of telephone interfaces for electronic communications with a plurality of telephones.

3. (Original) The telephone network interface as defined in claim 1 wherein the control service provider communicates with the telephone network interface through use of a telecommunications network.
4. (Original) The telephone network interface as defined in claim 1 wherein the control service provider communicates with the telephone network interface through use of a global computer network.
5. (Original) The telephone network interface as defined in claim 1 wherein the control service provider communicates with the telephone network interface through use of a computer network.
6. (Original) The telephone network interface as defined in claim 1 wherein the control service provider includes schedule data to indicate when certain messages are to be sent to certain embedded devices.
7. (Original) The telephone network interface as defined in claim 1 wherein the control service provider includes device location data to indicate the address of certain embedded devices.
8. (Previously Presented) A combined telephone network interface and gateway for facilitating communications through use of a telephone with an embedded device and for facilitating communications between a remote service provider and the embedded device, the combined telephone network interface and gateway comprising:
 - a telephone interface for electronic communication with a telephone;
 - an external telephone network interface for connecting the telephone network interface to an external telephone network;

a gateway for electronic communications with the embedded device, the gateway being programmed to communicate with the embedded device, and the gateway also being programmed to enable communications with the embedded device from a control service provider;

connection control, the connection control operating to cause the telephone to be selectively in electronic communication with the external telephone network for telephone calls such that a user at the telephone is capable of dialing out and is capable of receiving an incoming telephone call, and the connection control operating to selectively cause the telephone to be in electronic communication with the gateway for communicating with an embedded device such that device requests from the telephone are communicated to the gateway, wherein the gateway is in electronic communication with the embedded device, and the connection control operating to selectively cause the gateway to be in electronic communication with the external telephone network to enable electronic communications between a control service provider and the gateway, and wherein the gateway comprises device information about the embedded device.

9. (Original) The combined telephone network interface and gateway as defined in claim 8 further comprising a plurality of telephone interfaces for electronic communications with a plurality of telephones.

10. (Original) The combined telephone network interface and gateway as defined in claim 9 wherein the control service provider communicates with the telephone network interface through use of a telecommunications network.

11. (Original) The combined telephone network interface and gateway as defined in claim 9 wherein the control service provider communicates with the telephone network interface through use of a global computer network.
12. (Original) The combined telephone network interface and gateway as defined in claim 9 wherein the control service provider communicates with the telephone network interface through use of a computer network.
13. (Original) The combined telephone network interface and gateway as defined in claim 9 wherein the control service provider includes schedule data to indicate when certain messages are to be sent to certain embedded devices.
14. (Original) The combined telephone network interface and gateway as defined in claim 13 wherein the control service provider includes device location data to indicate the address of certain embedded devices.
15. (Previously Presented) The telephone network interface as defined in claim 1 wherein the device information comprises capabilities of at least one embedded device.
16. (Previously Presented) The telephone network interface as defined in claim 1 wherein the device information comprises interfaces supported by at least one embedded device.
17. (Previously Presented) The telephone network interface as defined in claim 1 wherein the device information comprises data available on at least one embedded device.
18. (Previously Presented) The combined telephone network interface and gateway as defined in claim 8 wherein the device information comprises capabilities of at least one embedded device.

Appl. No. 09/911,152
Amdt. dated October 24, 2006
Reply to Office Action of July 25, 2006

19. (Previously Presented) The combined telephone network interface and gateway as defined in claim 8 wherein the device information comprises interfaces supported by at least one embedded device.

20. (Previously Presented) The combined telephone network interface and gateway as defined in claim 8 wherein the device information comprises data available on at least one embedded device.
